## NATIONAL PHOTOGRAPHIC INTERPRETATION CENTER

## NAME

Airframe Plant No 166, Omsk

COUNTRY	GEO COORDINATES	WAC	NPIC NO
USSR	54-58N 73-26E	0163	5-A

USATC, Series 200, Sheet 0163-10HL, 2d ed, Sep 62 (S)

Omsk Airframe Plant No 166 is located immediately south of Aircraft Engine Plant Baranova No 29 in the eastern section of Omsk. The plant consists of the Main Plant Area, the Final Assembly and Checkout Area, and Omsk East Airfield. The Final Assembly and Checkout Area is located at the airfield, which serves as a test and flyaway field. Observation of the plant is important because it has not been determined from photography whether the plant is engaged in missile production, or, if it is, to what extent the plant facilities are engaged in such production.

[redacted] photography, which covered the entire plant, is the best photography of the plant [redacted] and has permitted a detailed analysis of changes observed since that time. In the Main Plant Area (Figure 1) construction of a large probable foundry has been under way [redacted]

[redacted] This building, which has recently been completed, is irregularly shaped and contains approximately 70,000 square feet of floor-space. Other construction in the southeast corner of the Main Plant Area includes roof alterations and the addition of a small wing to a workshop. The new wing contains approximately 18,000 square feet of floorspace. In the Final Assembly and Checkout Area (Figure 2) a large section has been added to the south side of the final assembly hall. This section was first observed under construction [redacted] and was completed [redacted] It contains approximately 135,000 square feet of floorspace. Other construction in this area includes the completion of a small steamplant and the extension of the security fence on the east side. No apparent changes in the facilities at Omsk East Airfield were discernible.

As a result of the new additions, the total floorspace in the plant has been increased from approximately 2.2 million square feet to approximately 2.5 million square feet.

[redacted] 1 FITTER, 28 FISHPOT, 1 FIREBAR, 18 FAGOT/FRESCO, and 3 CAB were observed at the plant and flyaway field. Five of the FISHPOT were parked at the final assembly hall.
